MPV Updates August 2, 2016

What follows is the board-approved update to the MPV table. There are new cars in the list and old cars with new values. Some have changed dramatically, while others moved only slightly. Not every car in the MPV table is on this list. We focused on the cars we see the most.

I understand some here will say we missed the mark. Quite possible, but the table was originally designed to be a living document that changes if we made a mistake on a value. It may not have changed before, but it will now. If you think we were off by 200+ points on a car listed, let me know. Otherwise we're going to use this and see how it shakes out. We'll keep revisiting this every few months. Also, fair warning - if your value has gone down don't run out and swap a new engine into it. The swap rule IS changing and you don't want to get caught in the change and wind up over 500 points.

How did we reach these values? Phil has a formula (that he would be happy to share) that factors in all of the stats of a car that everyone discusses here on the forum. His final factor is the "X" factor. This is where we use our experience watching all these races to alter a value up or down. Just because a Chevy S10 has a 14:1 hp/lb ratio does not mean it can run with a Miata or E30. That's the "X" factor in use.

We also had to establish the 500-point car. The standard that all other cars are compared to. Like it or not, the standard is the BMW E36 2.5L. It's performance in stock trim and accessibility on the open market make it a simple choice for those looking to get into road racing fast and cheap. It is not the preferred racecar of ChumpCar, merely the point standard we compare all others to.

As mentioned at the board meeting, all values that have gone down will take effect immediately. Values that have gone up will take effect on 1/1/17. This is not in the posted BCR yet because I have not been home (and fly out for COTA at 5am tomorrow), but I will do my best to get that up tonight.

## **Michael Chisek**
